Art Unit: 1623

1. Claims 1-34 are pending in this application.
2. The abstract of the disclosure is objected to because of undue length. Correction is required.

See MPEP § 608.01(b).

3. Applicant is reminded of the proper content of an abstract of the disclosure.

A patent abstract is a concise statement of the technical disclosure of the patent and should include that which is new in the art to which the invention pertains. If the patent is of a basic nature, the entire technical disclosure may be new in the art, and the abstract should be directed to the entire disclosure. If the patent is in the nature of an improvement in an old apparatus, process, product, or composition, the abstract should include the technical disclosure of the improvement. In certain patents, particularly those for compounds and compositions, wherein the process for making and/or the use thereof are not obvious, the abstract should set forth a process for making and/or use thereof. If the new technical disclosure involves modifications or alternatives, the abstract should mention by way of example the preferred modification or alternative.

The abstract should not refer to purported merits or speculative applications of the invention and should not compare the invention with the prior art.

Where applicable, the abstract should include the following:

- (1) if a machine or apparatus, its organization and operation;
- (2) if an article, its method of making;
- (3) if a chemical compound, its identity and use;
- (4) if a mixture, its ingredients;
- (5) if a process, the steps.

Extensive mechanical and design details of apparatus should not be given.

4. Applicant is reminded of the proper language and format for an abstract of the disclosure.

Art Unit: 1623

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 250 words. It is important that the abstract not exceed 250 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

5. Claims 1-34 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-34 are indefinite because the phrase "suitable for the use in" does not state that the articles claimed are actually used for determining the presence of the amount of analyte in a biological sample. Rather, the phrase "suitable for the use in" implies the articles claimed may be used for determining the presence of the amount of analyte in a biological sample which does not particularly point out or distinctly claim the subject matter regarded as the invention.

Claims 3-6 recites the limitation "at least one reagent" in line 1 of each claim. There is insufficient antecedent basis for this limitation in the claim.

Art Unit: 1623

6. Claims 1-34 are allowable over the prior art of record.

7. The Douglas, Turpen and Regnier et al patent have been cited to further show the state of this art.

8. Any inquiry concerning this communication should be directed to Louise Leary at telephone number (703) 308-3533.
